

LAYOUT SUGGESTIONS FOR PLANTING

Our high-value kits of 38 plants boast 14 species. A kit will start a garden of approximately 75 square feet; this could be an area measuring 6 X 12 feet. With a smaller planting such as this (or even up to a couple hundred square feet) there are some basic design ideas to consider when placing plants within the garden.

DISPERSED: By trying to evenly disperse each species of plant in the kit throughout the planting area, you will maximize the visual interplay between plants and take maximum advantage of the self-seeding and natural spreading capacity of each plant. It may be practical to place the taller plants toward the center or back so that they are better contained within the garden. For a true naturalized garden this may be the best way to start.

GROUPS AND DRIFTS: Sometimes people like to see a bit more immediate order to their planting. This could be achieved by grouping each species in its own sector of the garden or elongating these groups into loose lines or drifts of plants. Our kits can be augmented with a Mix & Match tray of four to six species to add larger groupings or drifts of favorite species.

WOODLAND GARDEN KIT

FOR MEDIUM SOIL AND FULL TO PART SHADE.

* We may need to substitute appropriate species, without notice, in the case of unexpected greenhouse failures or sold out species later in the season.

This layout is a combination of **dispersed and grouped plants**. The low "carpeting" plants like Bloodroot and Wild Stonecrop are placed on the outside, with the taller plants like Solomon's Seal in the garden center. This allows the garden to be seen in full seasonally and from all directions. Clip and collect seeds to manage redistribution or leave seed heads to enjoy from late spring through fall. ***This layout is just a suggestion.***
