PRAIRIE MOON NURSERY®

Native Seeds & Plants for Gardening and Restoration • Since 1982

WHAT IS A NATIVE PLANT?

We define a native plant as one **indigenous to North America prior to European settlement**: a species that co-evolved with the flora, fauna, and regional conditions. A native plant has **not been cultivated for characteristics** such as flower shape and size, leaf color, or growing height.

A native plant is **not naturalized or introduced**. There are many plants that have entered the American landscape (either by accident or intentional) and thrived, like Queen Anne's Lace and Dame's Rocket. Some introduced plants are aggressive and invasive, like Garlic Mustard, Purple Loosestrife, and Multi-flora Rose. These are known to wreak havoc on our native plant populations.

WHY CHOOSE NATIVE PLANTS?

Native plants are foundational to our ecosystems, supplying food and habitat for local wildlife. Their presence **maintains soil health, filters water, cleans the air, and supports biodiversity**. In addition to their ecological benefits, native plants are often **better suited to the local climate and soil conditions**, which means they require less resources to thrive. This aptitude makes them a sustainable choice for gardening, landscaping, and creating low-maintenance green spaces.

Whether it's a few square feet or several acres, we can all make a difference... hope grows in every backyard!

JOIN THE MOVEMENT. CHOOSE NATIVE PLANTS!

WHY CHOOSE US?

Prairie Moon offers the largest native plant collection available for retail sales in the US.

We provide over 700 North American species, including uncommon and rare native plants. Since 1982, we have been renowned for extraordinarily **clean seed and reliable plants** that have been used by national parks, local municipalities, teachers, farmers, and backyard gardeners across the country.

When you buy from Prairie Moon, you know you are getting **authentic, wild-type native plants**. We are dedicated to helping you be a part of the collective effort to nurture and sustain the living landscape. Our website and catalog are great educational resources to help make your project a success. Need more support? Call us!

STARTING FROM SEED

The seeds of many native plants have dormancy mechanisms that protect them from germinating before killing frosts or in times of drought. In the wild, seeds lie dormant until the proper conditions for growth occur.

The successful native plant gardener must become familiar with several simple pre-sowing seed treatment methods to stimulate quicker, more consistent germination.

Our seed germination codes were developed to help you successfully grow the seed we sell. Find the germination code(s) for each of our 700+ species within this catalog, on our website, and directly on each seed packet.

LEARN MORE! • SEARCH “GERMINATION” at prairiemoon.com

GERMINATION CODES

A No pre-treatment necessary: Seeds germinate after sowing in a warm location.

B Hot water treatment: Bring water to a boil; remove from heat. Pour over seed and allow the seed to soak for 24 hours at room temp prior to planting or starting artificial stratification.

C (#) Seeds germinate after experiencing a winter season: or after a period of artificial cold, moist stratification. Sow seeds outdoors in the fall to over-winter naturally and see germination the following spring, or artificially stratify seeds for the number of days in the parentheses. For more detailed instructions on artificial stratification, go to prairiemoon.com and type GERMINATION into the search bar.

D Seeds are very small or need light to naturally break dormancy and germinate: Surface sow.

E Seeds need a warm, moist period (summer) followed by a cold, moist period (winter): Sow seeds outdoors in spring and expect germination the following spring, one full year later. To artificially mimic this stratification process, mix seeds with damp sand, place in a labeled, sealed plastic bag and store in warm (about 80°F) location for 60–90 days. Then place in the refrigerator (33–38°F) for another 60–90 days before sowing.

F Seeds have double dormancy and need a cold, moist period (winter) followed by a warm, moist period (summer) followed by a 2nd cold, moist period: Sow seeds outdoors in the fall and expect germination after 2 years. To artificially mimic this stratification process, follow instructions for code C for 60-90 days, then store in a warm (70 to 80°F) place for 60-90 days, followed by a 2nd cold, moist period for 60-90 days.

G Seeds germinate most successfully in cool soil: Sow seeds in late fall (after hard frost) or early spring.

H Seeds need scarification: To scarify, lightly rub the seed between two sheets of sandpaper before artificial stratification.

I Legume: Rhizobium Inoculum may be added: Most legume species harbor beneficial soil bacteria called Rhizobium (plural rhizobia) in nodules on their roots. These rhizobia aid in the fixation of atmospheric nitrogen and improve long-term health of native plant communities. Rhizobia are naturally occurring in most soils and additional amendment is usually not needed. However, it may be necessary in low fertility soils. Genus-specific Rhizobium strains are available at prairiemoon.com/inoculum

INOCULUM FOR LEGUMES

Choose from 8 different Rhizobium inoculum strains. **SHIPS FREE!**
Inoculates up to 1 lb of seed.....\$6.00

J We remove the hulls from this species: If seed from other sources has the hull intact, scarification may be necessary.

K Hemiparasitic species which needs a host plant: Good hosts for many parasitic species include low-growing grasses and sedges.

L Plant fresh seed or keep moist: Refrigerate until planting or starting other treatment.

M Best planted outdoors in the fall.

? Not sure: Your input would be of interest to us.

GERMINATION CODE C: NATURAL STRATIFICATION

OUTDOOR SOWING:

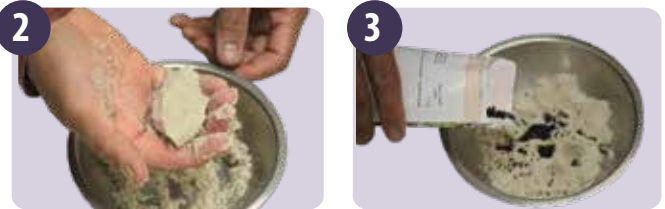

To naturally stratify seed, surface sow outdoors late fall through winter on a bare (weed-free), compact site and allow seed to overwinter. If you are new to perennial seed starting, this would be the preferred method.

GERMINATION CODE C: ARTIFICIAL STRATIFICATION

SAND METHOD: SUITED FOR PLANTING IN ROWS

Place stratification sand into a bowl. Use ~1/3 cup of fine sand to 1/8 oz seed. Add water: 1 to 2 teaspoons per 1/3 cup of sand.

Mix only enough water to allow sand to form into a ball. Add your seed to the stratification sand and mix together. Our package label will indicate the suggested number of days for artificial stratification i.e. C (60) = 60 days of cold, moist conditions needed.

Refrigerate the seed mixture in a sealed plastic bag marked with start and finish dates. Check periodically so that the mixture does not dry out. If premature sprouting occurs, plant into containers and continue to grow them indoors until spring. Once cold, moist stratification is complete, sow the seed into rows outdoors when the threat of freezing temps has passed.

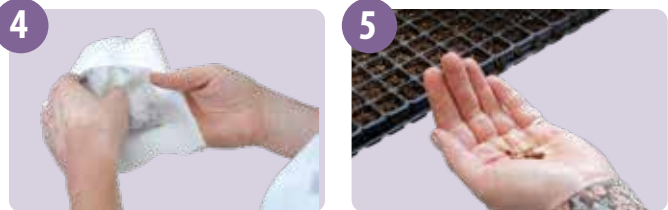

COFFEE FILTER METHOD: SUITED FOR CELLS OR CONTAINERS

Using your germination code, calculate the date to start cold, moist stratification. Rinse or complete a short soak. Pour into a coffee filter, paper towel, or fine screen to drain.

Arrange seed in a single layer and allow all excess water to drain off. Fold seed loosely into the coffee filter or paper towel to allow for weekly spot checks. The seed and paper should be damp but not wet.

Add a dry paper towel to your labeled resealable bag to help to maintain even moisture & pull excessive moisture away. Do not allow the stratification medium to completely dry out or stay soggy. Place the sealed bag in your refrigerator (not freezer) and monitor weekly until its time to remove for sowing. Once seed has completed the stratification period, or if early sprouting occurs, plant immediately.

SEED PACKET COLLECTIONS

These are the ultimate mini-mixes for themed garden sites between 15 and 45 square feet. Species in each collection are approachable for gardeners at any skill level. **MAKES A GREAT GIFT!**

1 COLLECTION = 6 PACKETS OF SEED

BIRD BENEFIT COLLECTION
Perfect gift for birders! Better than a bird feeder.

Includes 1 seed packet of each species:
Columbine, White Wild Indigo, Partridge Pea, Purple Coneflower, Showy Sunflower, & Cup Plant \$24

MILKWEED COLLECTION
Boost Monarch populations by planting Milkweed!

Includes 1 seed packet of each species:
Poke Milkweed, Rose Milkweed, Common Milkweed, Butterfly Weed, Whorled Milkweed, & Spider Milkweed \$24

NEW TO NATIVES COLLECTION
Quick to sprout & will often set flowers in their first growing season.

Includes 1 seed packet of each species:
Butterfly Weed, Partridge Pea, White Prairie Clover, Spotted Bee Balm, Black-eyed Susan, & Side-oats Grama \$24

BEST SELLER!

BEGINNER'S COLLECTION
Let's get started! These species are easy to germinate & fast-growing.

Includes 1 seed packet of each species:
Purple Prairie Clover, Purple Coneflower, Wild Bergamot, Black-eyed Susan, Smooth Blue Aster, & Little Bluestem \$24

MOST POPULAR

BOULEVARD COLLECTION
Convert an inhospitable patch of land into a beautiful pollinator oasis!

Includes 1 seed packet of each species:
Side-oats Grama, Lance-leaf Coreopsis, Sundial Lupine, Spotted Bee Balm, Aromatic Aster, & Hoary Vervain \$24

RAIN GARDEN COLLECTION
Flood-prone area? No problem! Transform that site into a sanctuary.

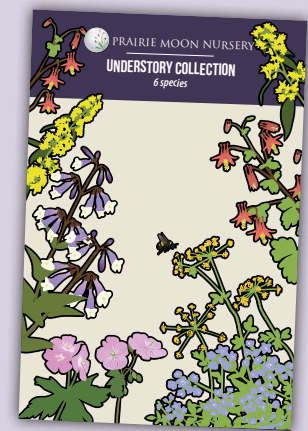

Includes 1 seed packet of each species:
Rose Milkweed, Joe Pye Weed, Sneezeweed, Cardinal Flower, Obedient Plant, & New England Aster \$24

FOR SHADY SITES

LIVING FENCE COLLECTION
Create a privacy screen with these tall, easy-to-grow shade-loving natives.

Includes 1 seed packet of each species:
Hairy Wood Mint, Tall Bellflower, Sweet Joe Pye Weed, Wild Golden Glow, Early Figwort, & Culver's Root \$24

UNDERSTORY COLLECTION
Add a pop of color to shaded sites to sustain pollinators.

Includes 1 seed packet of each species:
Columbine, Wild Geranium, Hairy Beardtongue, Jacob's Ladder, Zig Zag Goldenrod, & Yellow Pimpernel \$24

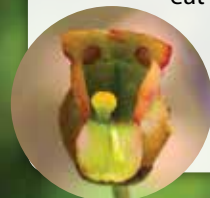

2026 PLANT SPOTLIGHT
FIGWORTS

Looking for funky natives to add pizzazz to your planting? Put Figworts on your wish list this season!

Although their chalice-shaped flowers are tiny, pollinators have no problem finding this "honey pot" plant. Their subtle intrigue yields enormous results: according to the Xerces Society, Figworts are among the best native plant species for attracting bees, butterflies, wasps, and Ruby-throated Hummingbirds! Each of these pollinators are drawn to the seemingly endless supply of nectar that the Figwort flowers produce.

Such bounty is supported by hardy stock: Figwort plants are incredibly adaptable and resilient. They tolerate a wide spectrum of sun conditions and soil moisture. Sturdy stalks stay upright, bolstered by the square stem shape, lending another common name for these plants: Carpenter's Square.

Robust foliage makes a great filler in any garden. Plants can grow to 6' tall, but don't be put off by the height! Their serrated leaves occur less frequently as they climb the stem, making the miniscule buds readily accessible for airborne visitors. Browsing wildlife does not often eat Figworts, making them an even greater asset in the garden!

"The hummingbirds adore them! The plants themselves may not be very showy, but they are lovely in a quiet, airy way and the life around them makes them one of my favorite garden plants!" - Diane H., IA

Early Figwort
Scrophularia lanceolata

SUN	SOIL MOISTURE	HT	BLOOM	*GERM CODE

PRAIRIE CLASSICS

FOR DRIER SOIL

Dry soil can be challenging, but you may be surprised at how many native plants naturally thrive in quick-draining sites: even those with high sand, rock, or gravel content.

Violet Wood Sorrel
Oxalis violacea

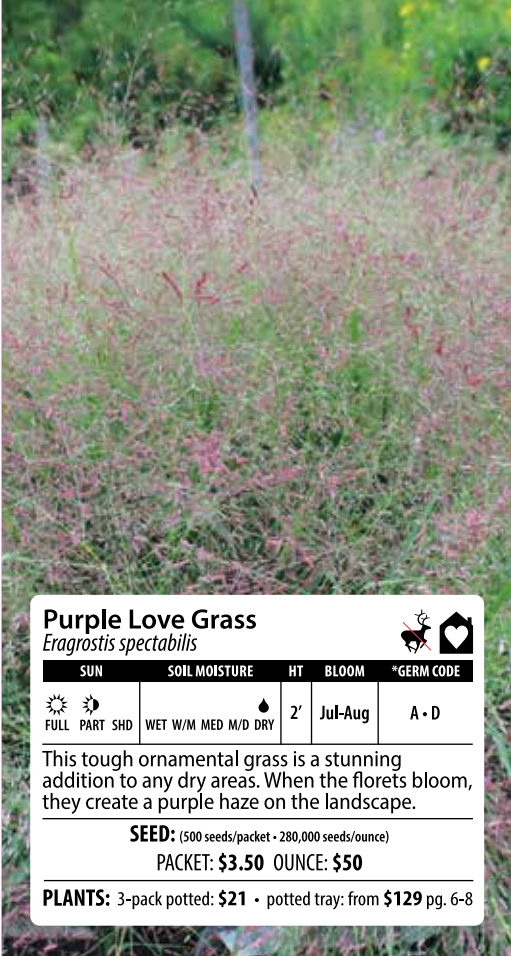

SUN	SOIL MOISTURE	HT	BLOOM	*GERM CODE
   FULL PART SHD	  WET W/M MED M/D DRY	4"	Apr-Jun	C(60) • M

The clover-like leaves of this plant are composed of three heart-shaped leaflets that fold in the shade. Underground bulbs quickly form colonies.

SEED PACKET: \$3.50 (100 seeds)
bulk seed quantities available at prairiemoon.com

PLANTS: bare root: 1-2 **\$7 ea.** 3+ **\$6 ea.**

Purple Love Grass
Eragrostis spectabilis

SUN	SOIL MOISTURE	HT	BLOOM	*GERM CODE
   FULL PART SHD	 WET W/M MED M/D DRY	2'	Jul-Aug	A • D

This tough ornamental grass is a stunning addition to any dry areas. When the florets bloom, they create a purple haze on the landscape.

SEED: (500 seeds/packet • 280,000 seeds/ounce)
PACKET: \$3.50 OUNCE: \$50

PLANTS: 3-pack potted: **\$21** • potted tray: from **\$129** pg. 6-8

INDIGO • BAPTISIA

SHOWSTOPPING FORM

These plants masquerade as shrubs throughout the spring and summer months, providing sturdy structure, a full form, and lovely blossoms in a native planting. However, their true herbaceous nature is revealed in the fall, when the plants darken to charcoal gray. The stark contrast and architectural intrigue is often blown away by winter winds, when the mass of stems and rattling seedpods detach and tumble as a seed dispersal tactic.

PLANTS: bare root: 1-2 **\$7 ea.** 3+ **\$6 ea.**

FOR THE FIREFLIES

Known by many different names - like fireflies, lightning bugs, and glow worms - over 100 different species of these beetles make their home in North America. Boost conservation efforts and help support these whimsical insects:

- 1. Provide Habitat** – Fireflies thrive in secluded, moist, organically rich environments. Encourage them to stay at your place by setting aside a space for tree and plant material to naturally decompose. Grow a diversity of native plants with different heights. Most female fireflies send their signals from taller plants, blinking like little lighthouse beacons above the prairie.
- 2. Don't Use Insecticides** – Need we say more?
- 3. Turn Off the Lights** – Light pollution is instantly fixed: simply flip the switch. Keep outdoor lights to a minimum so lightning bugs can communicate with each other.
- 4. Talk to the Neighbors** – Fireflies are not limited to a single plot. Get friendly with your neighbors and encourage their involvement. Together, we can keep their lights glowing.

Zig Zag Goldenrod
Solidago flexicaulis

SUN	SOIL MOISTURE	HT	BLOOM	*GERM CODE
  	  	3'	Aug-Oct	C(60) • D
FULL	WET W/M MED M/D DRY			

Named for the way the stem angles itself from one broad leaf to the next, creating a zig-zag effect. A critical food source for pollinators.

PLANTING RANGE

Typical seasonal conditions in the **GREEN** areas are suited to growth of cool-season grasses like the fescues in Eco-Grass.

Typical seasonal conditions in **TAN** areas are suited to growth of warm or cool season grasses but planting Eco-Grass on very dry, well-drained sites here is not recommended.

ECO-GRASS

LOW MAINTENANCE LAWN ALTERNATIVE

A versatile blend of fine-leaved fescue grasses that is the responsible alternative to an energy-intensive conventional turf lawn.

Early spring is a great time to plant Eco-Grass, when it has the advantage of early-season soil moisture.

Eco-Grass grows in most soil conditions, thriving in all but the shadiest and wettest settings. This fescue blend establishes quickly, and will grow into a flowing carpet that can either be mowed or unmowed.

The relatively deep root systems (4-9") enhance drought resistance by reducing water loss as they seek out deeper water reserves. Eco-Grass also yields big savings as a lawn alternative by eliminating or reducing the need for pesticides, fertilizers, and frequent watering or mowing.

When Eco-Grass reaches about 8", it begins to form seed heads and tends to flop over, which can add an attractive naturalistic flow to landscapes. Once established, it is durable under moderate foot traffic. It resists invasion by filling in well, but will not encroach on neighboring plantings.

A cool-season grass blend, Eco-Grass is best planted on a prepared site from which competing species have been removed in early fall or early spring. Seeds can be hand-broadcast or distributed with a grass-seed spreader and should be lightly raked in and then watered well for the first two months, if needed. Depending upon conditions, germination can be expected in one to two weeks.

The cool-season nature of Eco-Grass shows in its bright-green luster in late autumn, followed by browning in dormancy and an early spring green-up.

PACKET: \$3.50 OUNCE: \$20

PLANTS: 3-pack potted: \$24 • potted tray: from \$129 pg. 6-8

GROWING YOUR PRAIRIE FROM SEED

Establishing a successful native planting from seed is a labor of love and patience. Most folks who have embarked upon the adventure will praise the process: the thrill of discovery and the absolute joy of transforming a space with little to no biological activity into a healthy ecosystem thrumming with life.

SITE PREP & SEEDING

Preparing a site is the crucial first step for native plantings. There are many methods, but the goal is to eliminate as many generations of weedy growth as possible. Most sites require at least 1 full growing season, spring through fall, to be ready for seed. After site prep is complete, sow your seed any time between late-fall and early-spring.

YEAR 1 • MOWING

Keep the site trimmed or mowed at ~6" throughout the first growing season. This controls any remaining weeds while promoting strong root development in the slower-growing perennial natives.

YEAR 2 • PIONEER FLUSH

Stop mowing or trimming at this point. Most of the plants will be growing robust green foliage in year 2. A few native species are expected to bloom this growing season, like Black-Eyed Susan and Partridge Pea. Species that are quick to establish are called the pioneer species.

YEAR 3+ • PLANT DIVERSITY

As time goes on, long-lived perennial natives will take up more space and slowly replace the pioneer flush with greater diversity and complexity. Continued site maintenance may include spot-weeding and either renewal burns or cutting.

500 sq. ft. (~ 1 gal).....	\$24.00
1,000 sq. ft. (~ 2 gal).....	\$30.00
1/8 acre (~ 5 gal).....	\$38.00

Environmentally-friendly Rice Hulls are a great filler material to mix with your seeds prior to sowing for easy broadcasting. **SHIPS FREE!**

SEED MIXES

The native seed mixes featured at Prairie Moon are rooted in 40+ years of experience in prairie design. We focus on seeding rates: our goal is to include at least 100 seeds per square foot and at least 30 species in each mix. This results in a native plant community, representative of nature, with blooms spring through fall. Each seed mix includes the exact species list, % by weight, and total % of forbs, shrubs, and graminoids - transparency you may not find from other sellers. Our seed mixes are extremely diverse and boast the highest seed counts in the industry.

PRAIRIE MOON STAFF FAVORITES

With over 700 native species, we can't fit them all in this catalog!
Find these staff favorites and more at [PRAIRIEMOON.COM](https://prairiemoon.com)

CAVAN
Education & Outreach

Eastern Bluestar *Amsonia tabernaemontana*

A social butterfly, Cavan would love it if you'd say 'hi' at one of the many educational events he attends. Follow us on social media to learn where Cavan will pop up next! He thinks the Bluestar (*Amsonia*) genus doesn't get enough attention. Easy to grow and care for, try a few Amsonia plants for year-round garden interest!

SEED PACKET: \$3.50 (20 seeds)

bulk seed quantities available at prairiemoon.com

PLANTS: 3-pack potted: \$21

KAYLA
Greenhouse Manager

Sneezeweed *Helenium autumnale*

A seeker of efficiency and data-driven results, Kayla has been managing our Greenhouse for over 7 years. She says, "Don't be fooled by the name "Sneezeweed;" allergy sufferers can grow this cheerful native without issue - its pollen is distributed by insects, not wind.

SEED PACKET: \$3.50 (500 seeds)

bulk seed quantities available at prairiemoon.com

PLANTS: 3-pack potted: \$21 • potted tray: from \$129 pg. 6-8

KLAUS
Operations Member

White Trout Lily *Erythronium albidum*

Among the newest members to the Moon crew, we welcomed Klaus this past spring. One of his favorite natives reminds him of his favorite hobby - fly fishing! The mottled leaves on a colony of White Trout Lily are unmistakable in early spring.

SEED PACKET: \$3.50 (10 seeds)

bulk seed quantities available at prairiemoon.com

PLANTS: bare root: \$10 ea.

MARICEL
Order Fulfillment

Royal Catchfly *Silene regia*

Maricel has been with us for over 15 years and has worked in nearly every department at Prairie Moon! She's also an expert native gardener and grows plants on consignment for us. She loves Royal Catchfly for that rare red color you don't often see in a prairie, plus it's a hummingbird favorite!

SEED PACKET: \$3.50 (100 seeds)

bulk seed quantities available at prairiemoon.com

PLANTS: 3-pack potted: \$24 • potted tray: from \$129 pg. 6-8

SUNSHINE
Production Manager

Western Indian Physic *Porteranthus stipulatus*

True to her name, Sunshine is a ray of light for all of us who work with her. She leads her Crew to collect seed from Western Indian Physic in early fall, at which point the leaves are a brilliant burgundy. You won't find this native for purchase anywhere else!

SEED: (75 seeds/packet • 7,500 seeds/ounce)

PACKET: \$3.50 OUNCE: \$25

PLANTS: 3-pack potted: \$24 • bare root: \$7 ea.
